ABOUT ME

When I first came across programming and printed out my first "Hello World" and for a second felt like superman, I knew this is where I belong.

A personal rule of thumb: is keeping a learning attitude. This rule has enabled me to acquire new skills and methods to tackle projects as well as build a strong network. My achievements are as a result of my passion and zeal to grow. I'm that type of a person who likes it when things are not working for it shows that there's a challenge up ahead.

SKILLS

- Java
- Springboot
- MySQL
- PostgreSQL
- Thymeleaf
- HTML
- CSS
- JavaScript
- Bootstrap
- React
- Python
- Linux
- Git

EXPERIENCE

Bank Application (link)

Technology: HTML, Bootstrap, CSS, Java, Springboot, MySQL, Thymeleaf

This app enables users to send, receive and check balance from their account. Main goal was to be able to provide receipts of all transactions which was achieved.

User login, registration and email verification web application. (link)

Technology: Springboot, Lombok, PostgreSQL

This app was designed in pure springboot and Lombok to reduce boilerplate code. Main achievement of the project was to create, save and send an email verification token with an expiring date.

Eshop Web Application (link)

Technologies: Springboot, Java, MySQL, react

An ecommerce web application that incorporates all the essential functions. The app is still under development.

Management Web Application (link)

Technologies: Springboot, Java, PostgreSQL, HTML, Thymeleaf, Bootstrap

This is a web application that helps manage students. which I developed for a mission school. The application was built under Object-Oriented Programming Principles.
